

## Oxidize your shell

5+1 modern CLI tools for *Ye Olde* rusty geekos

# Brace yourself

We are going to replace

- `cat`
- `find`
- `grep`
- `ps`
- `time`
- `PS1`

# Why ? I like my old tools!

... and they work flawlessly 😡

- A pillar of free software: diversity, richness, freedom of choice... The [Bazaar](#)!
- New users use them on other platforms, maybe you want to know what those foolish young hipsters mess around with 😎
- Totally optional, use at your own pace. Nothing disappears installing them
- Good OSS projects, small enough to start contributing in a new programming language (also because they may lack features that unix veterans can bring in 😊)
- Why not ? Trying something new won't hurt

**And of course...**

**... because there's a cute mascot like Ferris the crab**

## The tools 1/2

1. **bat** 🦇 an alternative to `cat` , with syntax highlighting and `git` integration.  
Shows non-printable characters
2. **procs** a modern replacement for `ps` : colored output, integrate filtering and paging
3. **fd** a simple, fast and user-friendly alternative to `find` . Smart case, colored output, `.gitignore` integration, parallel command execution

## The tools 2/2

4. [ripgrep](#) a `grep` alternative specialized in code search. [Fast](#), unicode+git aware and with replacement support
5. [hyperfine](#) a command-line benchmarking tool with many features: analysis across multiple runs, realtime feedback, warmup runs, statistical outlier detection

## Bonus mention

[Starship](#) 

The minimal, blazing-fast, and infinitely customizable prompt for any shell!

# How they can be useful ?

- A richer and pleasant CLI experience can improve day to day productivity
- Green field for innovation: no legacy constraints, no limit to try out new ideas
- Learning from well written Rust source code
- Packaged in OpenSUSE (check out how they are packaged on [OBS](#))

# Thanks!

These slides are Open Source and live in a [github repository](#), feel free to improve them ❤️
